The enclosed Wisconsin Right to Life logos are formatted in both vertical (stacked) and horizontal (wide) layout. The number of varied file types allow you to choose the version best suited to your need.

If you need to scale larger, EPS and PNG files work better than JPEG. If you need a transparent background for use in video or print, PNG and EPS include alpha channel information allowing easy placement on existing images. The JPEG files have a solid background with accurate color in the RGB color specs.
